

Exabeam Threat Intelligence Service (TIS)

Uncover potential threats in your environment with real-time insight into indicators of compromise (IOC) and malicious hosts

| Threat Intelligence Feeds | Description |
|---------------------------|--|
| IP Threats | Malware IPs or IPs reported as malicious |
| Ransomware IPs | IPs associated with ransomware campaigns |
| Tor IPs | Official TOR network exit nodes |
| Reputation domains | Domains associated with malware traffic |
| Web Phishing | Domains associated with phishing attacks |

Fully integrate threat intelligence into your SIEM and workflows

Use the Exabeam Threat Intelligence Service (TIS) in correlation rules or behavioral analysis models to indicate added risk of notable users and entities. It automatically leverages IP and domain reputation without requiring your team to install apps, write scripts, or alter workflows.

Keep up-to-date

With the threat intelligence feed integrated directly into your SIEM, you always have the most up-to-date threat intelligence, enabling you to quickly identify and mitigate new and emerging attacks. New security capabilities are added with no additional cost or impact to you.
